

# Speech Auto Attendant

**Polty's Inc.**  
Unified Communications Solutions

## ► Overview

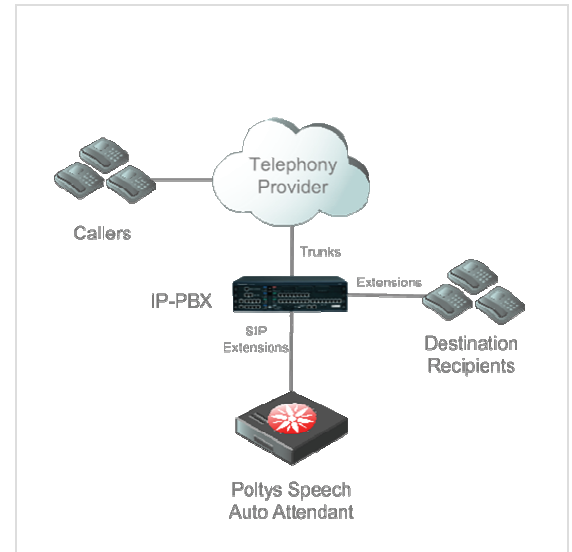

Polty's **Speech Auto Attendant** connects the caller to the intended extension by speaking his/ her name or by dialing the extension number.

It uses a set of SIP extensions from the IP-PBX in order to route the incoming calls to the destination extensions according to the caller spoken name and a predefined list of routing extensions.

Speech Auto Attendant takes advantage of Microsoft Speech Engine in order to identify the destination recipient names.

## ► Key Features
